# The dot product

The diagram illustrates the dot product of two vectors. The first vector, represented by a blue column, contains the quantities of fruit: 2 apples, 4 bananas, and 1 cherry. The second vector, represented by a teal column, contains the prices per unit: \$3 for an apple, \$5 for a banana, and \$2 for a cherry. The dot product is calculated as the sum of the products of corresponding elements:  $2 \times 3 + 4 \times 5 + 1 \times 2 = 6 + 20 + 2 = 28$ . The result is \$28.

$$2a + 4b + c = 28$$

The diagram illustrates the equation  $2a + 4b + c = 28$  using fruit icons and a dot product representation. On the left, there are three blue boxes containing the numbers 2, 4, and 1. Above the box with 2 are two red apples, above the box with 4 are four yellow bananas, and above the box with 1 is one red cherry. To the right of these boxes is a dot product representation: a row of three items (a dollar sign, a red apple, a yellow banana, and a red cherry) multiplied by a column of three light blue boxes containing the variables  $a$ ,  $b$ , and  $c$ . This is followed by an equals sign and a dollar sign, and then an orange box containing the number 28.

A 2x2 grid of blue squares, representing the result matrix. The grid is composed of four identical blue squares arranged in two rows and two columns, separated by thin white lines.

# Multiplying matrices

The diagram illustrates the multiplication of two 2x2 matrices. On the left, the first matrix (teal) is  $\begin{bmatrix} 2 & -1 \\ 0 & 2 \end{bmatrix}$  and the second matrix (orange) is  $\begin{bmatrix} 3 & 1 \\ 1 & 2 \end{bmatrix}$ . An equals sign follows. To the right, a 2x2 grid of blue boxes shows the four dot products that form the resulting matrix. Each blue box contains a teal 1x2 vector and an orange 2x1 vector. The top-left box shows  $\begin{bmatrix} 2 & -1 \end{bmatrix}$  and  $\begin{bmatrix} 3 \\ 1 \end{bmatrix}$ . The top-right box shows  $\begin{bmatrix} 2 & -1 \end{bmatrix}$  and  $\begin{bmatrix} 1 \\ 2 \end{bmatrix}$ . The bottom-left box shows  $\begin{bmatrix} 0 & 2 \end{bmatrix}$  and  $\begin{bmatrix} 3 \\ 1 \end{bmatrix}$ . The bottom-right box shows  $\begin{bmatrix} 0 & 2 \end{bmatrix}$  and  $\begin{bmatrix} 1 \\ 2 \end{bmatrix}$ .

# Multiplying matrices

The diagram illustrates the multiplication of two 2x2 matrices. The first matrix (teal) has elements  $\begin{bmatrix} 2 & -1 \\ 0 & 2 \end{bmatrix}$ . The second matrix (orange) has elements  $\begin{bmatrix} 3 & 1 \\ 1 & 2 \end{bmatrix}$ . The result is a 2x2 block matrix where each block is a 2x2 matrix. The top-left block is a scalar 5. The other three blocks are 2x2 matrices with elements from the input matrices.

# Quiz

- Find the inverse of the following matrix. If you find that the task is impossible, feel free to click on “I’m reaching a dead end”

1	1
2	2

# Solutions

- The inverse doesn't exist!

We need to solve the following system of linear equations:

$$\begin{bmatrix} 1 & 1 \\ 2 & 2 \end{bmatrix} \begin{bmatrix} a & b \\ c & d \end{bmatrix} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

$$a + c = 1$$

$$2b + 2d = 1$$

$$2a + 2c = 0$$

$$b + d = 0$$

This is clearly a contradiction, since equation 1 says  $a+c=1$ , and equation 3 says  $2a+2c=0$ .
